## 1. General

We would like to thank you for choosing Hotel WP. Built by the latest version of WordPress and used with WordPress only as well as using the powerful page builder plugin Visual Composer, Hotel WP brings to new experiences for users to create awesome hotel websites. Now let's jump to the theme presentation.

### 1.1. Requirements for Hotel WP

In this section, we present Recommended PHP configuration limits and How to verify your current PHP limits. But before that, make sure that you're running the **latest version of WordPress**, **PHP version 5.6** or higher and **MySQL version 5.6** or higher.

#### Recommended PHP configuration limits

One of the issues you may run into is importing demo data fails. The first solution is to increase PHP limits. You can do this by yourself or contact your server provider to ask for the help to increase following PHP limits:

- max\_execution\_time = 6000
- max\_input\_time = 6000
- memory\_limit = 256M
- post\_max\_size = 750M
- upload\_max\_filesize = 750M

#### How to verify your current PHP limits

Verify your PHP limits in *Dashboard >> Hotel WP >> System Status*. Or contact the server provider to confirm your current PHP limits are and have them set it up again if neeed.

### 1.2. What's Included in Theme Package

When purchasing our theme on Themeforest.net from your Envato account, in *Download* tab, you can select to download entire theme package (All files & documentation) or just theme file (Installable WordPress file only). The theme package is a zip file containing the following files:

- **child-theme:** There is a zip file child theme and a readme.txt about some notes about child theme.
- **documentation:** A link to this documentation.
- **hotel-wp:** The WordPress theme.
- **Licensing.**

## 2. Installation

### 2.1. Theme Installation

You can install the theme by 2 ways: **Via WordPress** or **via FTP**.

#### 2.1.1. WordPress Upload

After you downloaded theme packages, exact theme package. The file you use to upload is a zip file named **hotel-wp**. Following these steps below to upload theme via WordPress:

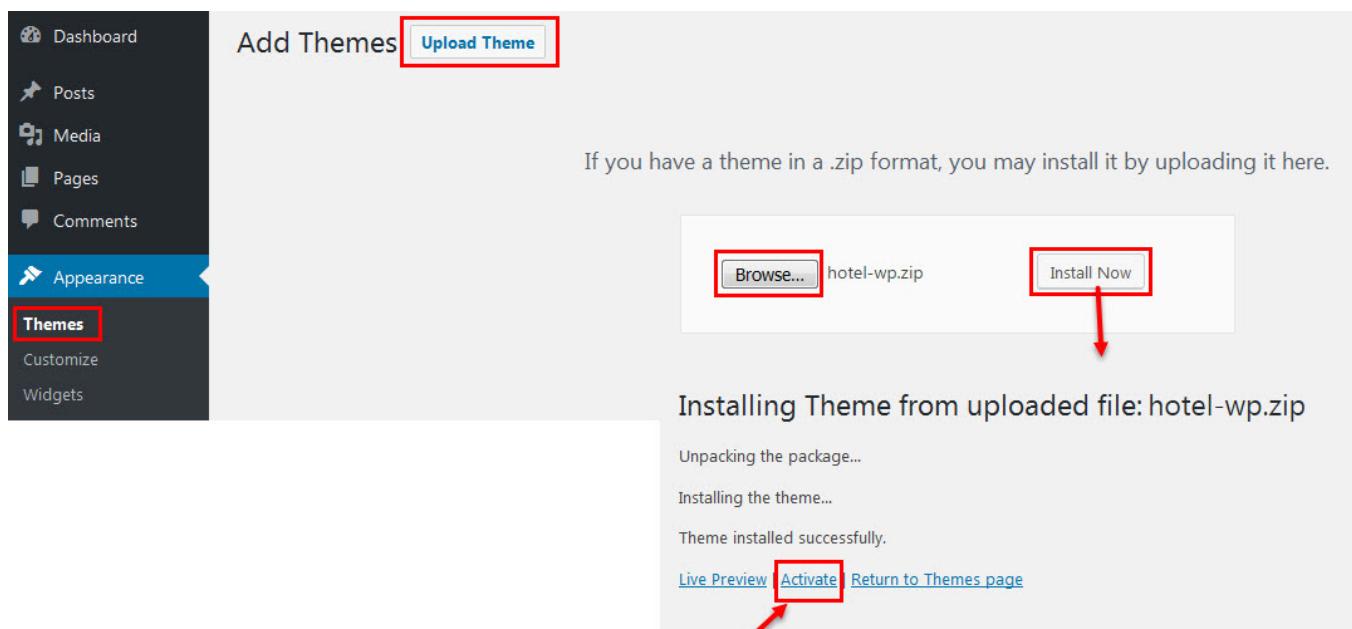

**Step 1.** Dashboard >> Appearance >> Themes >> Add New.

**Step 2.** Click **Upload Theme** button.

**Step 3.** Browser **hotel-wp.zip** file in your computer and click **Install Now** button.

**Step 4.** Active Hotel WP.

**Step 5.** After active the theme, you will see *Hotel WP notice!*. Click “**Install and active ThimPress Core to start now!**” to active core of Hotel WP, move to importing demo data process.

### Hotel WP notice!

Install theme success [Install and active ThimPress Core to start now!](#)

[Documentation](#) | [Forum](#) | [Knowledge Base](#)

## 2.1.2. FTP Upload

Following these steps below to upload theme via FTP:

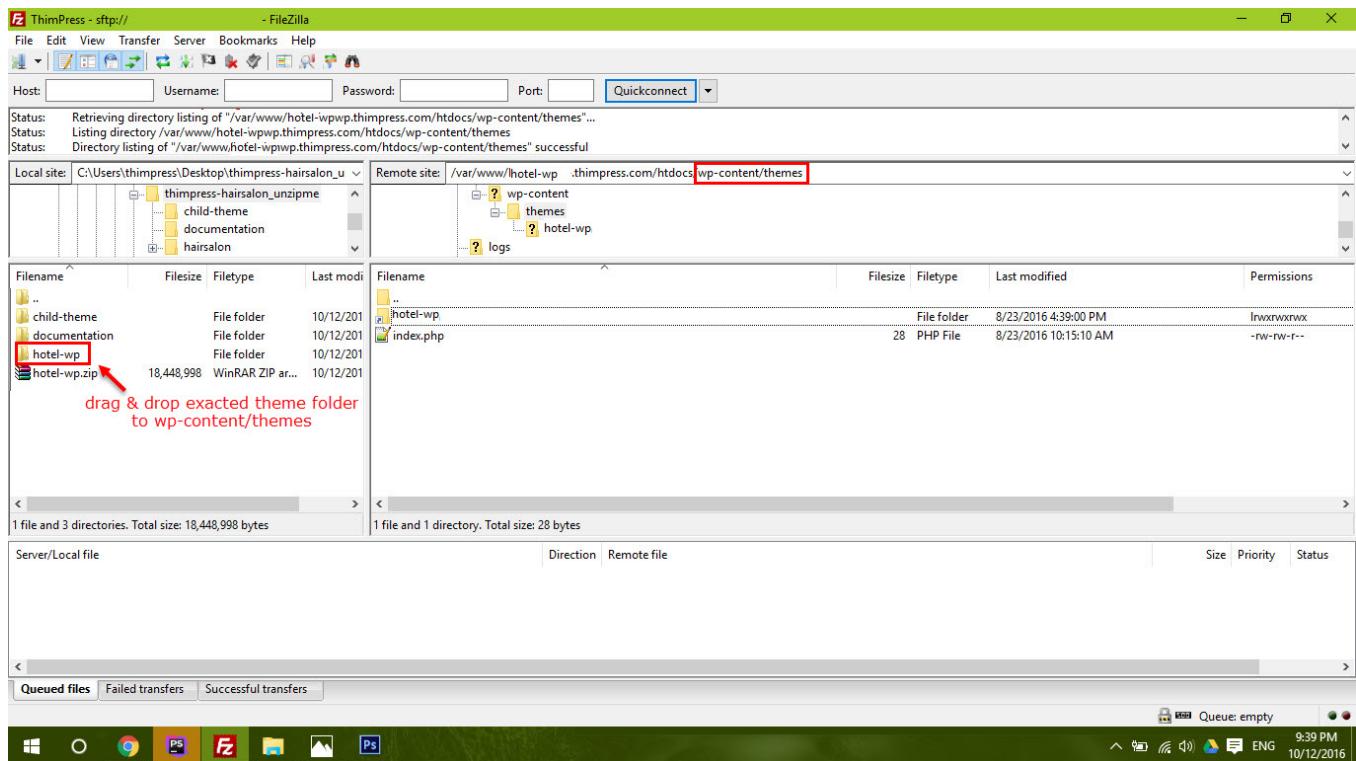

**Step 1.** Login your FTP account via an FTP software(<https://filezilla-project.org/download.php>) to access your host web server.

**Step 2.** Unzip **hotel-wp.zip** file.

**Step 3.** Upload the exacted theme folder **hotel-wp** to **wp-content/themes** folder.

**Step 4.** Active the theme in *Dashboard >> Appearance >> Themes*.

**Step 5.** After active the theme, you will see *Hotel WP notice!*. Click “**Install and active ThimPress Core to start now!**” to active core of Hotel WP, move to importing demo data process.

## 2.2. Plugins

**1. Hotel WP requires ThimPress Core plugin to work.** This plugin have to be actived as soon as you uploaded the theme. As we mentioned in section Upload Theme, afer you upload the theme, there will be a notification message “**Install and active ThimPress Core to start now!**” This is ThimPress Core plugin.

**2. TP Hotel Booking plugin:** This plugin transfers your site to a hotel website. Booking room process is worked basing on TP Hotel Booking plugin. See more about the plugin through this video([https://www.youtube.com/watch?v=9y\\_06B47Wss](https://www.youtube.com/watch?v=9y_06B47Wss))

**3. TP Events plugin:** This plugin allows to create and sell events on your hotel website.

When clients want to buy event ticket, they have to register an user on your site. You can address the page for the register/ login form in *TP Events >> Settings >> General tab >> Authentication Settings*.

Enable	<input style="width: 150px; height: 25px; border: 1px solid #ccc; padding: 2px 5px;" type="text" value="Yes"/> <span style="font-size: small;">▼ This controls enable payment method</span>
Paypal sandbox email	<input style="width: 450px; height: 25px; border: 1px solid #ccc; padding: 2px 5px;" type="text" value="TH10028-facilitator@gmail.com"/> <span style="float: right; font-size: small;">Paypal Business Email</span>
Paypal email	<input style="width: 450px; height: 25px; border: 1px solid #ccc; padding: 2px 5px;" type="text"/> <span style="float: right; font-size: small;">Production environment</span>

**Save changes**

When client complete a payment, an email will be sent automatically to confirm. Set email content in *Settings >> Emails tab*.

The screenshot shows the 'TP Events' settings page in the WordPress admin area. The left sidebar has a 'Settings' item highlighted with a red box. The top navigation bar has tabs: General, **Emails**, Checkout, and Account. The 'Emails' tab is active. There are three configuration fields: 'Enable' (set to 'Yes'), 'From name' (set to 'Hotel WP'), and 'Email from' (set to 'thongta@foobla.com'). Below these fields are their respective descriptions: 'This controls what the email' for 'Enable', 'This set email from name' for 'From name', and 'This set email send' for 'Email from'. At the bottom is a blue 'Save changes' button.

After setting, you can create events. You can set date, price for the each event.

- 4. Revolution Slider plugin:** Also a required plugin to install before importing demo data. This is a premium from Themepunch(<https://codecanyon.net/user/themepunch>)  
. Revolution Slider plugin is in *hotelwp/ inc/ plugins* folder. Configure Revolution Slider for Hotel WP as below:

Find more information about Revolution Slider here(<https://www.themepunch.com/revsilder-doc/slider-revolution-documentation/>)

**5. WooCommerce plugin:** The theme is integrated WooCommerce(<https://woocommerce.com/>) plugin for online shopping with full options of WooCommerce.

**6. Testimonials plugin:** Another plugin is developed by ourself. It creates *Thim: Testimonials* shortcode which allows you to show off your testimonials.

## 2.3. Update Theme

There are 2 ways to update the theme: **Via Envato Toolkit** – automatically update and **via FTP** – manually update. The updating will not loose your changes before but to be safety, you should backup([https://codex.wordpress.org/WordPress\\_Backups](https://codex.wordpress.org/WordPress_Backups)) files and database before updating. After updated, re-save customize in *Dashboard > Customize > click Save & Publish*.

### 2.3.1. Via Envato Toolkit

This is the easiest and fastest method to update theme. Do follow these steps to update by Envato Toolkit.

**Step 1.** Download Envato WordPress Toolkit here(<https://github.com/envato/envato-wordpress-toolkit>)

**Step 2.** Install and active the plugin in *Dashboard >> Plugins >> Add new*.

**Step 3.** Get your API keys.

**Step 4.** *Dashboard >> Envato Toolkit >> input API keys* (Marketplace Username & Secret API Key).

**Step 5.** After input API keys, there will be “Themes” tab. Now you can update theme automatically.

### 2.3.2. Via FTP

Sometimes, you may have troubles in updating by Envato Toolkit. So another way is to update via FTP. However, this way will take more time because you have to do step by step manually.

**Step 1.** Login you Envato account. In *Download* tab, find Hotel WP and choose the **Installable WordPress Theme** (the WordPress file).

**Step 2.** Login your server, then go to *wp-content/themes* folder and backup your **hotel-wp** theme folder if you want or delete it. The content in your site will not be lost but if you have modified code, the changes will be lost. You have to reapply them after updating over.

**Step 3.** Exact new file **hotel-wp.zip** you have already downloaded from Themeforest.

**Step 4.** Drag & drop new theme folder **hotel-wp** to *wp-content/theme* to override the existing files.

## 2.4. Child Theme

A child theme is a theme that inherits the functionality and styling of another theme, called the parent theme. If you modify a theme directly and it is updated, then your modifications may be lost. By using a child theme you will ensure that your modifications are preserved.

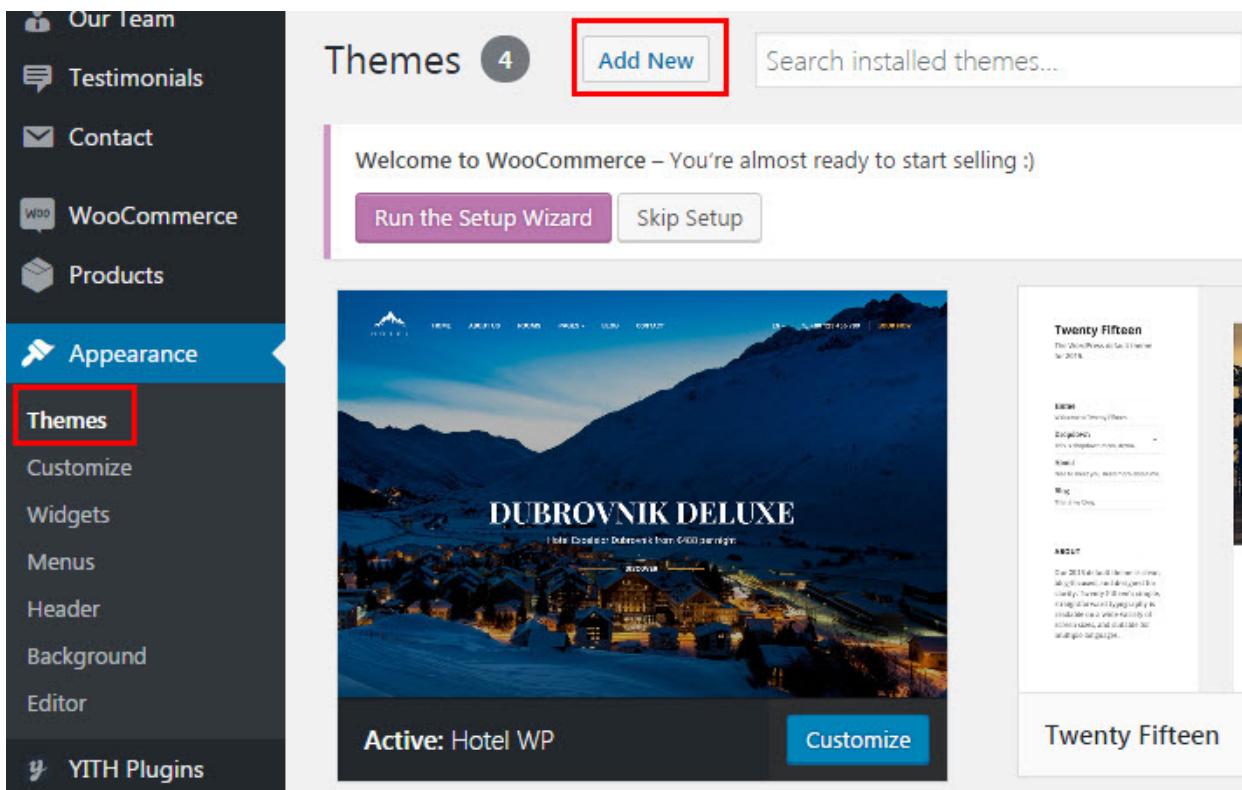

**Hotel WP** provides an available child theme so that you just need to upload to your site without doing anything else after installed the parent theme successfully. Child theme of Hotel WP is a zip file named **hotel-wp-child** packed in *child-theme* folder after exacted theme package (*child-theme/hotel-wp-child*). Uploading child theme is similar to uploading parent theme.

**Step 1.** Appearance >> Themes >> Add New.

**Step 2.** Click **Upload Theme** button.

**Step 3.** Browser child theme **hotel-wp-child.zip** file in *child-theme folder* and click **Install Now** button.

**Step 4.** Active child theme.

If you want to learn more about child theme and how to modify it, you can refer these links:

Codex WordPress about Child Theme([https://codex.wordpress.org/Child\\_Themes](https://codex.wordpress.org/Child_Themes))

WordPress Developer Theme Handbook(<https://developer.wordpress.org/themes/advanced-topics/child-themes/>)

## 3. Demo

### 3.1. Import Demo

The easiest way to import our demo content is to use our Thim Core Demo Importer. Our importer will give you all pages and posts, several sample sliders, widgets, Customize Options, assigned pages, and more. This is recommended to do on fresh installs. It will not replace content like posts, pages, portfolio, etc , it will not delete current menus but configure our demo menus, and it will not replace but add sliders. Another method is manually importing.

#### 3.1.1. Automatically Import

##### Using Thim Core Demo Importer

**Step 1** – Navigate to *Dashboard > Import Demo*.

**Step 2** – Select a demo and click **Import** button.

**Step 3 – Select what type of content do you want to import and click **Import** button.**

The import process may take up to 5 minutes. Enjoy a cup of tea while you wait ?.

The screenshot shows the Hotel WP Theme Dashboard. On the left, there's a sidebar with various menu items: WP Engine, Dashboard, Hotel WP (which is currently selected), Import Demo (also selected), Plugins, System Status, Rooms, TP Hotel Booking, Posts, TP Events, Media, Pages, TP Components, and Comments. At the top right, it says "1.0.0". Below the sidebar, there's a navigation bar with tabs: Dashboard, Import Demo (underlined in red), Plugins, and System Status. The main content area displays a preview of a website template titled "DUBROVNIK DELUXE" featuring a snowy mountain landscape. Below the preview, there are two buttons: "Demo" and "Import". A red box highlights the "Import" button, and a red arrow points to it with the text "Hover on demo then click \"Import\" button".

## Import Demo > Demo 01 X

Select what type of content do you want to import

**Theme Options**

This will import theme options and will rewrite all current settings.

**Main Content**

This will import posts, pages, comments, menus, custom fields, terms and custom posts.

**Media File**

This will download media files.

**Widgets**

This will import widgets.

**IMPORT**

### 3.1.2. Manually Import

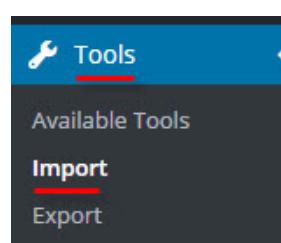

In the event that your host will not make changes, or you cannot get the demo content to import, you can then import the individual elements manually. Continue reading below to learn how to manually import demo content.

#### Where To Find Demo Files

There is a “content.xml” file placed in folder *name-themeincdata/demos*, just select a demo you want then find this file for importing demo.

#### How To Import XML Files

**Step 1** – Go to *Dashboard >> Tools >> click Import.*

**Step 2** – On the Import page, select WordPress from the list and install the WordPress Importer Plugin.

**WordPress Importer**

Blogger  
Blogroll  
Categories and Tags Converter  
LiveJournal  
Movable Type and TypePad  
RSS  
Tumblr  
WooCommerce Tax Rates (CSV)  
**WordPress**

The WordPress Importer will import the following content from a WordPress export file:

- Posts, pages and other custom post types
- Comments
- Custom fields and post meta
- Categories, tags and terms from custom taxonomies

If the importer you need is not listed, [Install Now](#)

Downloading install package from [https://downloads.wordpress.org/plugin/wordpress-importer.0.6.3.zip...](https://downloads.wordpress.org/plugin/wordpress-importer.0.6.3.zip)

Unpacking the package...

Installing the plugin...

Successfully installed the plugin WordPress Importer 0.6.3.

[Activate Plugin & Run Importer](#) | [Return to Importers](#)

**Step 3** – Click Choose File, then choose the content.xml file from your desired demo folder. For example, if you would like to install the Demo-01, you would install the content.xml inside the Demo-01 folder.

**Step 4** – Once you've chosen the correct file, click the Upload File and Import button.

Howdy! Upload your WordPress eXtended RSS (WXR) file and we'll import the posts, pages, comments, custom fields, categories and more.

Choose a WXR (.xml) file to upload, then click Upload file and import.

Choose a file from your computer: (Maximum size: 64 MB)  content.xml

**Upload file and import**

**Step 5** – Select *admin* in the dropdown list, and don't forget to check the '**Download and Import File Attachments**' checkbox.

## Assign Authors

To make it easier for you to edit and save the imported content, you may import all the entries as `admin`'s entries.

If a new user is created by WordPress, a new password will be randomly necessary.

### 1. Import author: Peter Parker (Thong)

or create new user with login name:   
or assign posts to an existing user: `admin` ▾

### 2. Import author: admin (admin)

or create new user with login name:   
or assign posts to an existing user: `admin` ▾

## Import Attachments

Download and import file attachments

**Submit** ← click "Submit" button

**Step 6** – Wait until WordPress is finished importing, then click the [Have Fun!](#) link to return to your dashboard.

All done. [Have fun!](#)

Remember to update the passwords and roles of imported users.

## How To Import Theme Options

Go to *Dashboard > Demo Importer* >> Select a demo that you imported XML file and click **Import** button  
>> Select content “Theme Options” and click **Import** button.

The API key for connecting with your MailChimp account. [Get your API key here.](#)

Save Changes

#### Create MailChimp Form:

Go to *Dashboard >> MailChimp For WP >> MailChimp >> Forms*:

Demo

Get shortcode Preview this form

Fields Messages Settings Appearance

Form Fields

Choose a field to add to the form

Form fields

Submit button List choice Form action

```
<div class="form-inline">
<div class="form-group">
<input type="email" name="EMAIL" placeholder="Enter your email address" required />
</div>
<div class="form-group">
<input type="submit" value="Sign up" />
</div>
</div>
```

enter content of MailChimp form

Save Changes

click "Save Changes" then shortcode will be auto created,  
just copy and paste into post, page or text widget

Use the shortcode [mc4wp\_form id="25"] to display this form inside a post, page or text widget.

Demo Hotel WordPress theme has a style MailChimp form available, just copy and paste below content into your MailChimp form:

SUBSCRIBE

## 4. Customize

### 4.1. Header

#### 4.1.1. Layouts

We designed 3 beautiful layouts for header to offer you multiple options for customizing your site. You can choose what items you want to display and how to order them in this section. Please see below how to customize it in *Dashboard >> Appearance >> Customize >> Header* and expand the *Layout* section.

- 1. Layout:** You can decide how to order the items on header. Choose one of the three layouts and click on it.

**2. Header Positions:** There are 2 styles for header position is “Overlay” or “Default”.

**3. Background Color:** Select background color for header.

After you finished customizing this section click the **Save & Publish** button.

The screenshot shows the 'Header Layouts' section of the WordPress Customizer. It includes a 'Reset' button and three layout options: 'LOGO -----' (top left), 'LOGO -----' (top right), and 'LOGO -----' (bottom). Below these are sections for 'Header Positions' (set to 'Overlay') and 'Background Color' (with a color palette and 'Select Color' button).

## 4.1.2. Main Menu

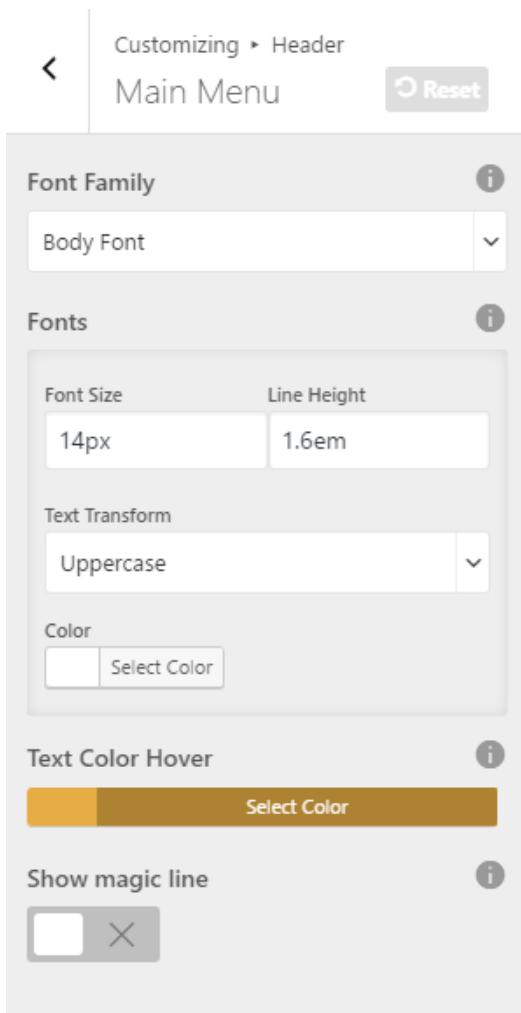

Hotel WordPress theme is so flexible that you can choose where you want to use the menus. Theme supports custom WordPress menus, with multiple levels of drop down for the main menu. There are 2 areas of the theme where you can display a menu: the Main Menu and the Footer Menu. In this section you will learn how to create a new menu, and customize the Main Menu.

Theme comes with some general options for the Main Menu. Go to *Dashboard >> Appearance >> Customize >> Header* and expand *Main Menu* section.

### Main Menu Options:

Hotel WordPress theme offers several theme options to customize the menu. They are located in *Appearance > Customize > Header >> Main Menu* tab. Users can customize the fonts, change color and height of menu text.

After you finished customizing this section click the **Save & Publish** button.

### How To Setup A New Menu:

**Step 1** – Navigate to *Appearance >> Menus* section of your admin sidebar.

**Step 2** – Click the Create A New Menu link to make a new menu. Enter the name then click the Create Menu button.

**Step 3** – To add a menu item, select one of your created pages on the left hand side and click the Add to Menu button. You can also add all kinds of different posts from the left side.

**Step 4** – To add a custom menu item, enter a custom name and link into the Links box.

**Step 5** – Manage your menus by using the drag and drop functionality. To create a dropdown menu, simply drag a menu item below and slightly to the right of another menu item, and it will lock into place and create a dropdown section.

**Step 6** – After setting up your menu, scroll down to the bottom of the page to assign “Primary Menu” in the Theme Locations box if you want this is “Main Menu”.

**Step 7** – Once its all done, make sure you click the **Save Menu** button.

Here is a screenshot that shows you the various areas and descriptions of the menu section described above.

### 4.1.3. Sticky Menu

Hotel WordPress theme supports to has a sticky header option. For improved usability, as the user scrolls down a page, the sticky header activates ensuring the website's main menu is always accessible. To manage the sticky header, Hotel WordPress theme includes several options for styling, as well as visibility options to enable or disable it on various screen sizes.

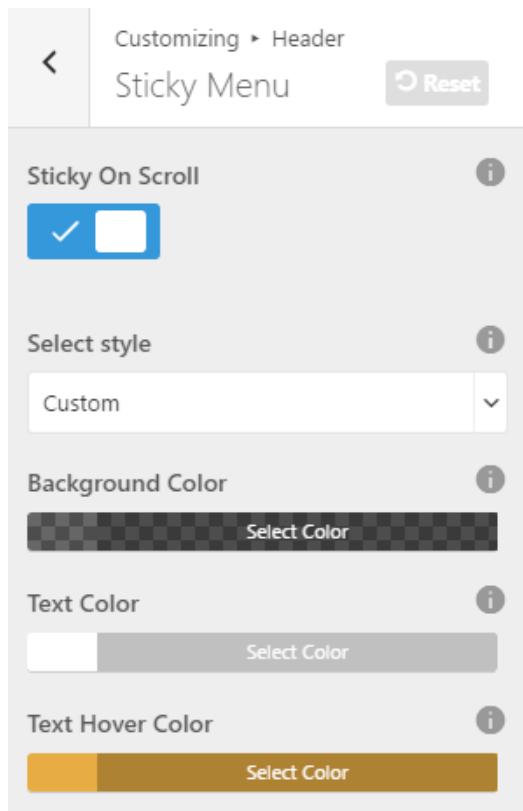

#### Sticky Menu Options:

Below is a list of all the available options for the Sticky Menu. These options are located in *Dashboard >> Appearance >> Customize >> Header > Sticky Menu*.

**1. Show Sticky On Scroll:** Enable/disable the sticky menu.

**2. Select Style:** Select style menu when scroll. If select “The same with main menu” then users do not need to configure for main menu when sticky anymore. If select “Custom” then users need to configure color for text, background, text hover for main menu.

After you finished customizing this section click the **Save & Publish** button.

#### **Sticky Logo Options:**

This option gives you the freedom to decide how to display the header logo on scroll. Go to *Dashboard >> Appearance >> Customize >> General >> Logo*.

**1. Sticky Logo:** Upload your logo and on your sticky logo will be loaded the header logo. If users want to change sticky logo, they can click “Remove” then “Change File” to replace sticky logo.

**2. Retina Logo:** This option allows you to add to your sticky menu a mobile logo.

After you finished customizing this section click the **Save & Publish** button.

#### 4.1.4. Sub Menu

##### Sub Menu Options:

Hotel WordPress theme offers several theme options to customize the sub menu. They are located in **Appearance>> Customize >> Header >> Sub Menu** tab. Users can change color of background, text, text hover for sub menu.

After you finished customizing this section click the **Save & Publish** button.

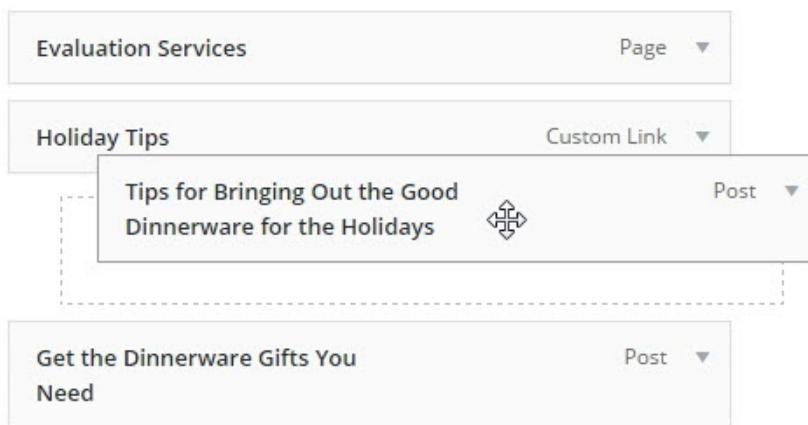

### How To Setup Sub Menu:

After following steps to Setup A New Menu(<http://docspress.thimpress.com/hotelwp/#mainmenu-HowToSetupANewMenu-hotelwp>)

, you need to learn how to setup sub menu. There are 2 ways to create sub menu:

You can drag the sub-menu item to the right until you see that the dashed outline box underneath is indented, then stop dragging:

Or simply use buttons under each menu item to move:

The screenshot shows the WordPress Customizer interface for the 'Blog' page. At the top, there's a header with 'Blog' and 'Page ▾'. Below it is a list of menu items. The first item is 'Blog Left Sidebar sub item', which has a URL of <http://hairsalonwp.thimpress.com/blog/?layout=sid> and a navigation label 'Blog Left Sidebar'. Underneath this item is a 'Move' button with three options: 'Up one', 'Down one', and 'Out from under Blog'. The 'Out from under Blog' option is highlighted with a red box and an arrow pointing to it. Below this item are two more items: 'Blog Sidebar Right sub item' and 'Blog Full Sidebars sub item', both with 'Custom Link ▾' dropdowns.

Once you've moved your sub-menu items, remember to click **Save Menu**.

## 4.2. Sidebar

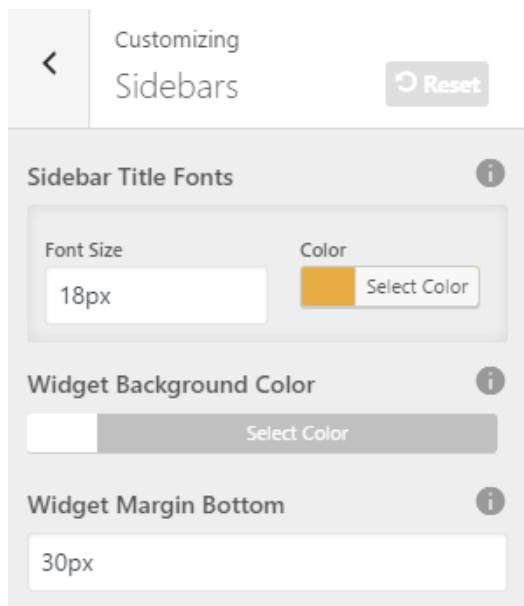

The sidebar is an additional area on the site, where you may place information for your visitors. You might use the sidebar to navigate a site, advertise something, as a way to gain new subscribers and followers, showcase or highlight specific content.

With Hotel WordPress theme, there are 2 pre-made area sidebars for Blog page and Shop page. Therefore, you don't need to create a widget area for them, you can simply add widgets to the pre-made widget area directly.

### Sidebar Options:

To configure for widgets in Sidebar areas, go to *Dashboard >> Appearance >> Customize >> Sidebars*. Users can configure Tittle Fonts, Widget Background Color, Widget Margin Bottom for widgets of sidebar, footer sidebar, siebar shop, footer banner, mega menu widgets.

After you finished customizing this section click the **Save & Publish** button.

### How To Create A Sidebar Area:

Hotel WordPress theme allows you to create unlimited amount of sidebars, and these sidebars can be assigned to several areas of the site such as the sidebar, footer sidebars, sidebar shop, footer banner, mega menu widgets. To learn more about widget ready areas, please see the steps below to understand how to create a sidebar.

**Step 1** – Navigate to *Appearance >> Widgets >>* give name of a new sidebar under field “Create new sidebar” click the “**Create**” button. You can add as many sidebar as you need.

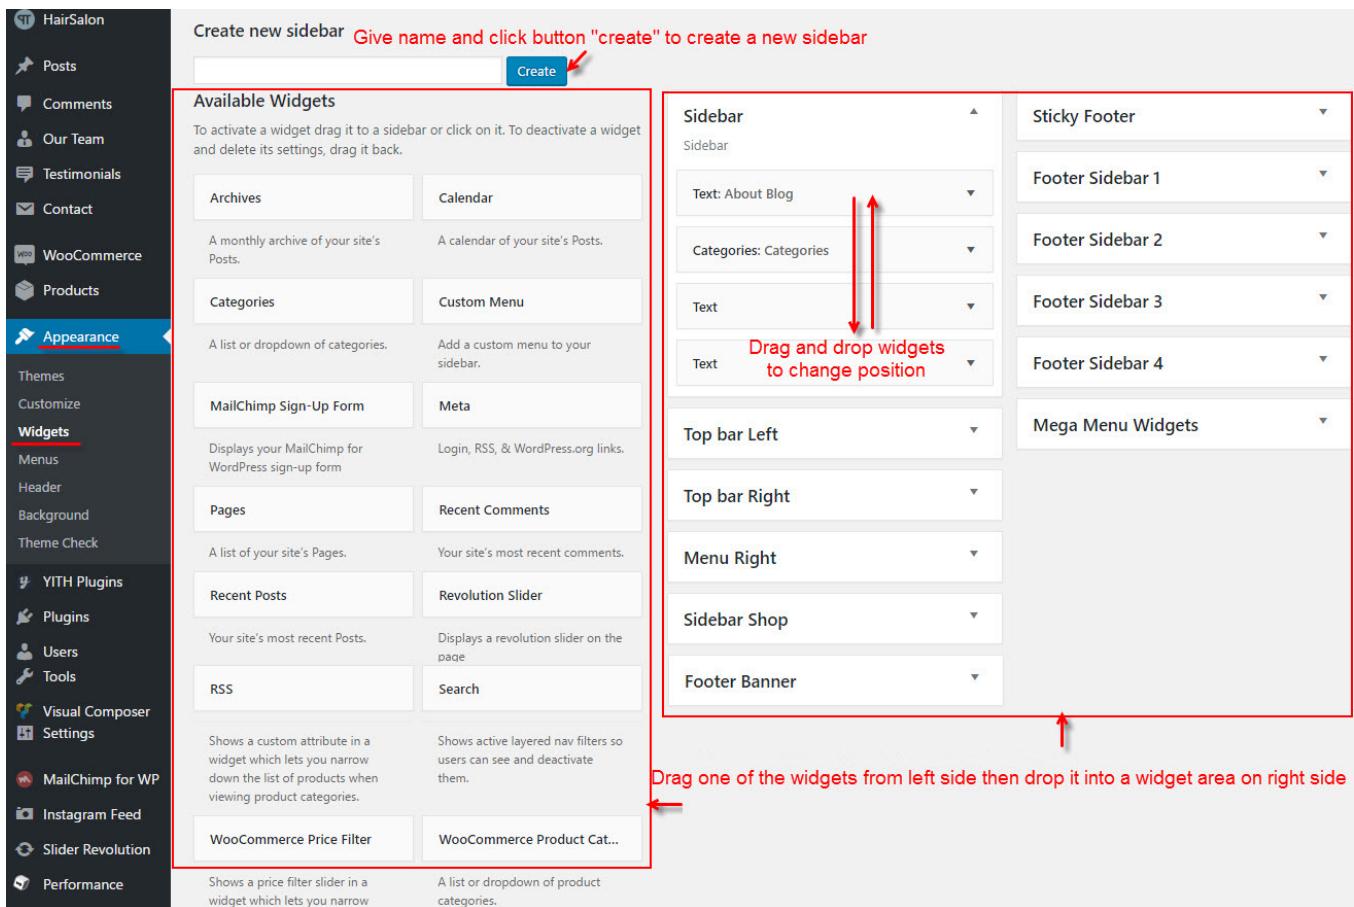

**Step 2** – Once created, you'll see your new sidebar on the right side.

**Step 3** – On the left side, you will see all the widgets you can use.

**Step 4** – Simply drag and drop the widget you want into your widget section. You can then customize the widget to your liking.

**Step 5** – You can rearrange the order of widgets on a widget section by simply dragging the widgets to place.

**Step 6** – Make sure you click the ‘**Save**’ button to save the widgets added to your widget section.

## 4.2.1. Blog Sidebar

### Setting Blog Page:

Blog page is a page to show posts. To select a page is blog page, you need to go to *Dashboard >> Setting >> Reading >>* select “*A static page*” *>>* select page for “*Posts page*” *>>* click “**Save Changes**” button.

Front page displays

Search Engine Visibility  Discourage search engines from indexing this site  
*It is up to search engines to honor this request.*

**Save Changes**

### Blog Layout Options:

To configure layout for blog page, go to *Dashboard >> Appearance >> Customize >> Blogs >> Layouts*. This is the place for you to select an alignment for your Blog page – which is place to show posts or for single post. You can choose whether or not to use the sidebar, as well as positioning it in a layout with 1 or 2 columns.

- 1 – No side bar at all
- 2 – One sidebar, located on the left
- 3 – One sidebar, located on the right
- 4 – Two sidebar, located on the left and right.

After you finished customizing this section click the **Save & Publish** button.

The screenshot shows the 'Customizing > Blog Layouts' section of the WordPress dashboard. At the top, there's a back arrow, the title 'Customizing > Blog Layouts', and a 'Reset' button. Below this, there are two main sections: 'Blog Archive Layouts' and 'Blog Single Layouts'. Each section contains four layout options, each represented by a grid diagram labeled 'HEADER', 'BODY', and 'FOOTER'. In the 'Blog Archive Layouts' section, the second layout from the top is highlighted with a blue border. In the 'Blog Single Layouts' section, the first layout from the top is highlighted with a blue border.

### How To Add Widgets To Blog Sidebar:

Hotel includes a wide array of custom widgets in addition to the default widgets WordPress offers. All widgets are found in the *Dashboard >> Appearance >> Widgets* tab. There are various customization options and fields for each individual widget, and they are all self explanatory. You can put as many widgets as you want inside of Blog Sidebar. Please read below for information on how to add widgets to Blog Sidebar.

**Step 1** – Navigate to the *Appearance >> Widgets* tab to access the list of widgets and widget areas. The left hand side shows all the widgets you can use. The right hand side shows all the different widget areas you can add widgets to, including Blog Sidebar.

**Step 2** – Simply drag and drop the widget you'd like to add into Sidebar area on the right side.

**Step 3** – To rearrange widgets on a widget section, just drag and drop the widgets into the order you'd like.

**Step 4** – When finished, make sure to click the “**Save**” button in the widget editing box to save your changes.

The screenshot shows the WordPress dashboard's Appearance > Widgets section. On the left, a sidebar lists various widgets with descriptions. On the right, the Sidebar configuration area is shown, featuring a list of widget slots: Sidebar, Sticky Footer, Footer Sidebar 1, Footer Sidebar 2, Footer Sidebar 3, Footer Sidebar 4, and Mega Menu Widgets. A red box highlights the 'Sidebar' slot, which contains three widgets: Text: About Blog, Categories: Categories, and Text. Red arrows indicate the drag-and-drop functionality for reordering these widgets. A red callout at the bottom right of the sidebar area says: "Drag one of the widgets from left side then drop it into a widget area on right side".

Available Widgets

## 4.2.2. Shop Sidebar

### Setting Shop Page:

Shop page is a page to show products, product categories. To select a page is shop page, you need to go to *Dashboard>> WooCommerce >> Settings >> Products tab>> Display sub tab >> select Shop page >> click “Save Changes” button.*

The screenshot shows the WordPress admin interface for the 'WooCommerce' settings. The left sidebar has a dark theme with various menu items like 'Dashboard', 'HairSalon', 'Posts', 'Media', 'Pages', 'Comments', 'Our Team', 'Testimonials', 'Contact', and 'WooCommerce'. The 'WooCommerce' item is highlighted. Under 'WooCommerce', there are sub-options: 'Orders', 'Coupons', 'Reports', 'Settings' (which is also highlighted), 'System Status', 'Add-ons', 'Performance', and 'Collapse menu'. The main content area has a header with tabs: 'General', 'Products' (which is active and highlighted in red), 'Shipping', 'Checkout', 'Accounts', 'Emails', and 'API'. Below the tabs, a message says 'Hola! Would you like to receive automatic updates and unlock premium support? Please [activate your copy](#) of Visual Composer.' Below that, a breadcrumb navigation shows 'General | **Display** | Inventory | Downloadable Products'. The main section is titled 'Shop & Product Pages'. It contains several configuration options: 'Shop Page' dropdown set to 'Shop' (highlighted by a red box), 'Shop Page Display' dropdown set to 'Show products', 'Default Category Display' dropdown set to 'Show products', 'Default Product Sorting' dropdown set to 'Default sorting (custom ordering + name)', 'Add to cart behaviour' with two checkboxes ('Redirect to the cart page after successful addition' is unchecked, 'Enable AJAX add to cart buttons on archives' is checked), and a 'Save changes' button at the bottom (highlighted by a red box). A note below the 'Shop Page' dropdown says 'The base page can also be used in your [product permalinks](#)'.

### Shop Page Layout Options:

To configure layout for shop page, go to *Dashboard >> Appearance >> Customize >> WooCommerce >> Layouts*. This is the place for you to select an alignment for your Shop page – which is place to show products, product categories. You can choose whether or not to use the sidebar, as well as positioning it in a layout with 1 or 2 columns.

- 1 – No side bar at all
- 2 – One sidebar, located on the left
- 3 – One sidebar, located on the right
- 4 – Two sidebar, located on the left and right.

After you finished customizing this section click the **Save & Publish** button.

### How To Add Widgets To Shop Sidebar:

Please read below for information on how to add widgets to Shop Sidebar.

**Step 1** – Navigate to the *Appearance >> Widgets* tab to access the list of widgets and widget areas. The left hand side shows all the widgets you can use. The right hand side shows all the different widget areas you can add widgets to, including Shop Sidebar.

**Step 2** – Simply drag and drop the widget you'd like to add into Shop Sidebar area on the right side.

**Step 3** – To rearrange widgets on a widget section, just drag and drop the widgets into the order you'd like.

**Step 4** – When finished, make sure to click the “**Save**” button in the widget editing box to save your changes.

## 4.3. Footer

Hotel footer consists of the widget area and the copyright area. Both of these areas can be configured in Customize. Footer Sidebar area consists of 6 total columns, and each column can have its own set of widgets.

You can select to show 1, 2, 3, 4, 5, 6 columns in the footer sidebar. Footer Widgets are added in the Footer Sidebars.

**Footer Section**

### Footer Section Options:

To configure for footer, go to *Dashboard >> Appearance >> Customize >> Footer tab >> Setting*. There are options:

- 1. Show Sticky Sidebar:** This option allows you to enable or disable a sticky footer. Checking this radio box will enable the Sticky Footer effect. This allows the footer to always stick to the bottom of the browser window, even on pages with little content. Notes that: height of sticky footer is fixed default.
- 2. Show Footer Widget:** This option allows you to show or hide Footer Widget area.
- 3. Sidebar Number:** The widget area consists of 6 total columns, you can select to show 1, 2, 3, 4, 5, 6 columns in the footer widget section. Each column can have its own set of widgets. You can learn how to add widgets into Footer Sidebar below.
- 4. Background Color:** Pick a background footer color.
- 5. Colors:** Pick color for title, text, link, hover on footer section.

After you finished customizing this section click the **Save & Publish** button.

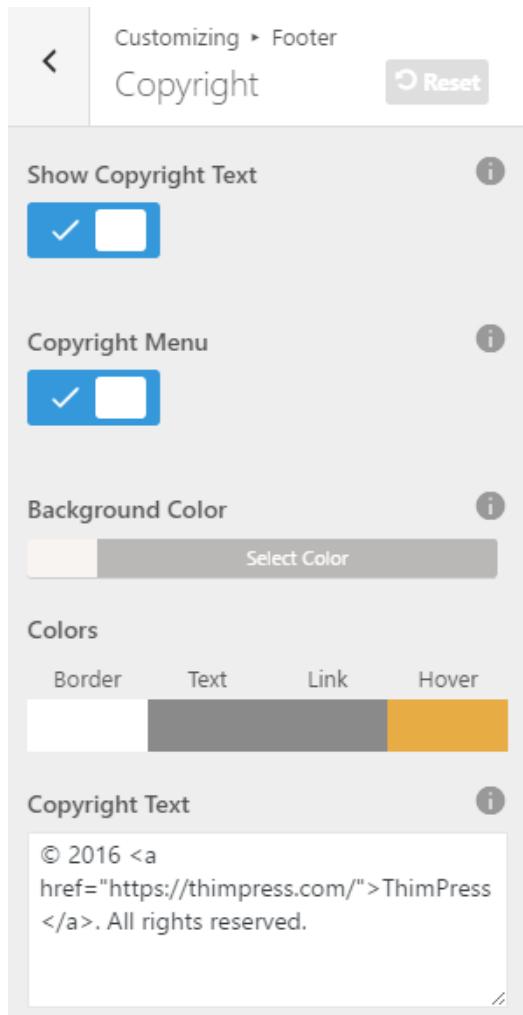

### Copyright Section Options:

To configure for footer, go to *Dashboard >> Appearance >> Customize >> Footer tab >> Copyright tab*. There are options:

- 1. Show Copyright Text:** This option allows you to enable or disable copyright text section.
- 2. Background Color:** Pick a background color of copyright section.
- 3. Colors:** Pick color for text, link, hover on copyright section.
- 4. Copyright Text:** Enter text in copyright section.

After you finished customizing this section click the **Save & Publish** button.

### How To Add Widgets into Footer Sidebar:

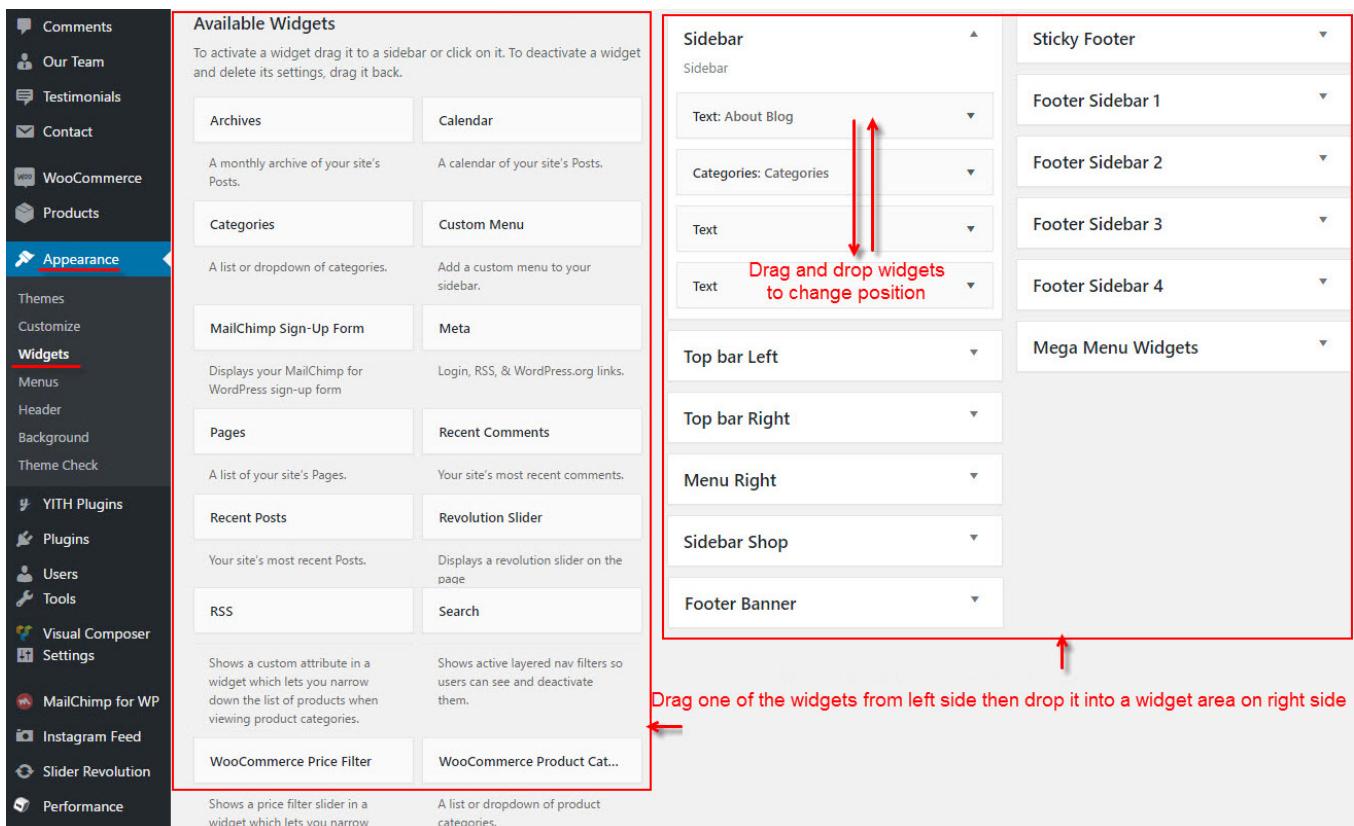

There are 1-6 columns that can display widgets. Widgets add various content or features to your site. They can be added, removed, and rearranged in *Dashboard >> Appearance >> Widgets tab >> Footer Sidebar*.

**Step 1** – First, make sure that you've enabled footer widgets on your site. To do this, navigate to the *Dashboard >> Appearance >> Customize >> Footer tab >> Setting* and switch the "Footer Widgets" option to On. Set how many columns you'd like to display by customizing the "Sidebar Number" option.

**Step 2** – Once you've enabled footer widgets, navigate to *Dashboard >> Appearance >> Widgets tab* to access the widgets and footer widget sections.

**Step 3** – You will see a 'Footer Sidebar X' sidebar on the right hand side for each footer column you selected to have in Customize.

**Step 4** – On the left hand side are your widgets, simply drag and drop the widgets you want from the left side into the 'Footer Sidebar' sidebar on the right side. See the screenshot below.

## 4.4. Typography

All typography options are located within their specific Customize panel. For example, if you'd like to customize your main menu typography settings, then you would find those options in the *Dashboard >> Appearance >> Customize >> Header >> Main Menu tab*. If you don't find the typography settings for a specific feature, it may be because it's been combined into a header typography option in *Dashboard >> Appearance >> Customize >> General >> Typography*.

**1. Body Typography Options:** To customize the Body Font, navigate to the *Appearance >> Customize >> General >> Typography >> Body Typography tab* where all the Body Typography options such as font family, weight, size, etc. are found.

**2. H1 – H6 and Post Title Typography Options:** To customize the Headers and Post Titles Font, navigate to the *Appearance >> Customize >> General >> Typography >> Heading tab* where all the Headers and Post Titles Typography options such as font family, weight, size, etc. are found.

**3. Specific Typography Options:** To customize specific typography options, such as Main Menu, Top Bar, Page Title, Sliding Bar, Sidebar, navigate to their specific panels to access their different typography options such as font family, weight, size, etc.

### Typography Options Setup:

**1. Font Family:** This option allows you to select a font family to use.

**2. Variant:** This option allows you to select a font weight and style to use.

**3. Subset:** This option allows you to select which subset to use.

- 4. Font Size:** This option allows you to set the size of the text on display.
- 5. Line Height:** This option allows you to set the spacing between lines.
- 6. Letter Spacing:** This option allows you to set the spacing between letters.
- 7. Text Transform:** This option allows you to set uppercase or lowercase.
- 8. Color:** This option allows you to set the color of the text.

After you finished customizing this section click the **Save & Publish** button.

## 6. Support Service

When purchasing our themes, you will receive the free 6 months of support service for the questions and problems regarding the theme. Once the period of your support service is expired, you can extend support to 12 months. But no matter your support service of your product is over or not, you always receive free timelife updates for the theme.

We really care about customer support services and guarantee to response to all support topics within 24 hours on weekday (a bit longer over weekend) since you posted a ticket.

### 6.1. Knowledge Base & FAQs

Before submitting a ticket on our support forum, please ensure that you meet all the following requirements:

- Refer documentation.
- Read changelog and make sure that your site is running the latest version of Hotel WP.
- Disable all 3rd part plugins because sometimes they're the reasons causing the issues.
- Clear all the caches after changing any settings in your site.

And check out our Knowledge Base and FAQs below to find out the answer for your question.

#### **How to get license key of included premium plugins (Visual Composer, Revolution Slider)?**

You can use included premium plugins such as **Visual Composer, Revolution Slider** for free when you purchase and download our themes from ThemeForest. So **you don't have to buy your own license** to use these plugins.

However, as a note from that plugin's author, you (theme buyer) can not active directly get support from them. But please don't worry if you see warning messages about the plugin license activation or update required. You always get the latest version of Visual Composer, Revolution Slider when we update the theme. We will test these plugins before send it to you to make sure there are no conflicts with our theme.

#### **Will customization be lost if I update theme?**

No, your customization in Customize panel will not be lost if you update theme. Only the coding modification in original theme's files will be lost and that's why you should deploy in child theme.

#### **Slider not found on home page**

After imported demo data but revolution slider on home page is missing, that's because you haven't configure revolution slider for home page. Check Revolution Slider settings in Plugin section(<http://docspress.thimpress.com/hotelwp/#plugins>)

#### **Customize can not be saved**

When you make some settings in Customize panel but the changes can not be saved. There are some common following reasons:

- It's due to your server error "500 Internal Server". Read here (<http://www.wpbeginner.com/wp-tutorials/how-to-fix-the-internal-server-error-in-wordpress/>) to know about the error and how to fix it.
- User of server (e.g Apache, Nginx) can't write file. Let chmod file style.css and config.less (all in the

theme directory) is 777.

- Your PHP version is outdated. PHP version 5.6 or higher is recommended.

There are also some sticky tickets we posted in purchased theme support forum. Please take a look these tickets. In case you can not find out the answer, don't hesitate to let us know by submitting a ticket.

## 6.2. Support Forum

Regarding the problems with code customizations or 3rd party plugins, we are not able to provide free support service. We just can provide you customization service(<https://thimpress.com/wordpress-theme-customization-services/>) at a fee.

### How to ask for support

**Step 1.** Click here to create an account(<https://thimpress.com/wp-login.php?action=register>) on our website. You will need the Themeforest purchase code(<https://thimpress.com/knowledge-base/how-to-get-my-envato-purchase-code/>) of your product.

**Step 2.** Go to support forum of your product and create your own topic. Here is support forum(<https://thimpress.com/forums/forum/hotelwp/>) of Hotel WP.
